LOGO ONLY

TEXT ONLY

Final deliverables:

AI: Adobe Illustrator vector format with editable text - will allow your logo to be scaled up and down as needed, you can also change the tagline or the color scheme.

PSD: Fully scalable built with vector masks, Photoshop layered file. The PSD file format is an industry standard and it allows color changes, or even adding or removing parts of the logo (by hiding or activating layers). The normal desktop printers (ink-jet and colour photocopier) are designed to work happily with a range of image file formats, including JPEG compressed files. However they will still work best with the maximum amount of image data supplied by an uncompressed image such as a PSD file.

EPS: This is an industry standard, meaning "Encapsulated PostScript". It can be imported into all major design programs, and is often the file of choice for printing companies.

Note: Because it contains important information regarding your company logo, you will receive a copy of this proof sheet inside the zip with the final deliverables.
