

The name of our foundation is **three leaves** in english, because we believe the core business of dairy production to be grazing.

And the optimal time to graze ryegrass pastures is between the second and **third leaf stage**, it is a moment when the plant has reached its highest nutrient content.

We are located in a rural área of the south of Chile. Our foundation is a Training Center (Technical Education) that specializes in teaching dairy production and grass management.

We want to promote the rural development of south of chile and help profesionalize the national industry.

Our training center currently has a logo, attached.
