

## Technical Services for Solar Assets

Nationwide technical services for investors and owners of solar PV systems.

We handle the technical so you can focus on the financial.

### Independent Engineering

#### Technical Due Diligence

We review all technical aspects of design, construction, and energy production to identify risks and expenses that must be modeled before your negotiation and acquisition.

#### Inspections & Testing

Commissioning and QC inspections are conducted with a high level of technical expertise to uncover issues that affect long or short-term revenue generation, so they can be addressed before they affect your profit.

#### SME for Disputes

We represent your interests and present facts and evidence backed by technical evidence. Our diverse technical expertise will ensure we discover the root cause issues of any incident.

### Operation & Maintenance

#### Preventative Maintenance

The three goals of a solar maintenance plan is to: maximizing performance (generated kWh), ensure safety, and avoid future expenses by catching issues while they are small and easy to repair.

#### Repairs

Our licensed electricians and NABCEP technicians are experts at diagnosing even the most complex issues, then conducting repairs quickly and cost effectively and minimize the effect on generation and your profit.

#### Monitoring

We monitor the alarms and performance, so you don't have to! Our national portfolio is monitored from our HQ where we will quickly determine the issue and advise you of the recommended course action.
